

# LGI ELECTRONIC DOCUMENTATION

Digitize your clinical documentation today

**82%** decrease in the amount of form inventory

**88%** of clients recommend the solution

**30 M** of documents entered representing tons less paper in the healthcare network

LGI Electronic Documentation (EDM) supports the autonomous configuration of intelligent forms. The solution enables healthcare organizations to centralize documentation quickly, easily, and securely according to their specific needs and processes.

Centralized and secure access to documentation

Seamless transfer of documents

Interoperability between systems and flexible configurations

Streamlined communications between stakeholders and facilities

## Examples of ready-made forms

### SURGERY REQUEST

Consolidates information to support workflows and eliminate double data entry

### MEDICAL IMAGING REQUISITIONS

Eliminates faxes by transferring electronic orders to the RIS and DCI

### HOSPITALIZATION SUMMARY SHEET

Supports workflows, increases team efficiency and reduces completion times

### ENDOSCOPY (FORTHCOMING)

Produces synoptic reports and documents required for the endoscopy care pathway

## The benefits of electronic forms

### INTELLIGENCE

Intelligent forms with dynamic fields, predefined value domains, complex validations and instructions (macros)

### INTEGRATION

Compliance with open data exchange standards (XML, HL7) to improve efficiency in two-way data transfer

### TIMESTAMPING

Save histories of consultations and form changes

### FLEXIBILITY

Option to include template forms with growth curves and attach photos, videos and other files

### DATA

Real-time dissemination of data collected via electronic forms, optimizing the clinical data pathway

### INTEROPERABILITY

Connected web interface allowing simplified access from other systems such as the DCI and eClinibase

### COLLABORATION

Access to form templates created by other Quebec healthcare facilities

### ACCESSIBILITY

Advanced management of access granted based on the type of form, the user's role and access profile

### SECURITY

Secure single sign-on via Keycloak protocols and Lightweight Directory Access Protocol Security (LDAP)
