

LGI RADIMAGE

Simplify medical imaging exam routing and data extraction

84% of clients recommend the solution

60% healthcare facilities use the solution

8 M exams processed

LGI Radimage makes it easier to track patients across the care pathway, from creating medical imaging requests and booking appointments to managing wait lists and sending results.

KEY FEATURES

- Imaging request creation
- Real-time tracking of request status
- Electronic protocolling of imaging exams
- Access to patient history during examination
- Extraction of customizable statistical reports
- Automatic transmission of reporting data to the Ministère de la Santé et des Services sociaux (MSSS)

TWO-WAY FUNCTIONALITY WITH LGI ECLINIBASE

- Recording of patient non-availability
- Log access mechanisms
- Removal of patients from wait lists after appointments are completed
- Standardization of appointment booking in facilities
- Coordination with other clinics
- Automatic transmission of patient lists to the appointment booking system

LGI Radimage benefits your teams and patients

MANAGERS

Producing tailored statistical reports lets you compare your resources' actual performance against established targets and redirect patients more effectively.

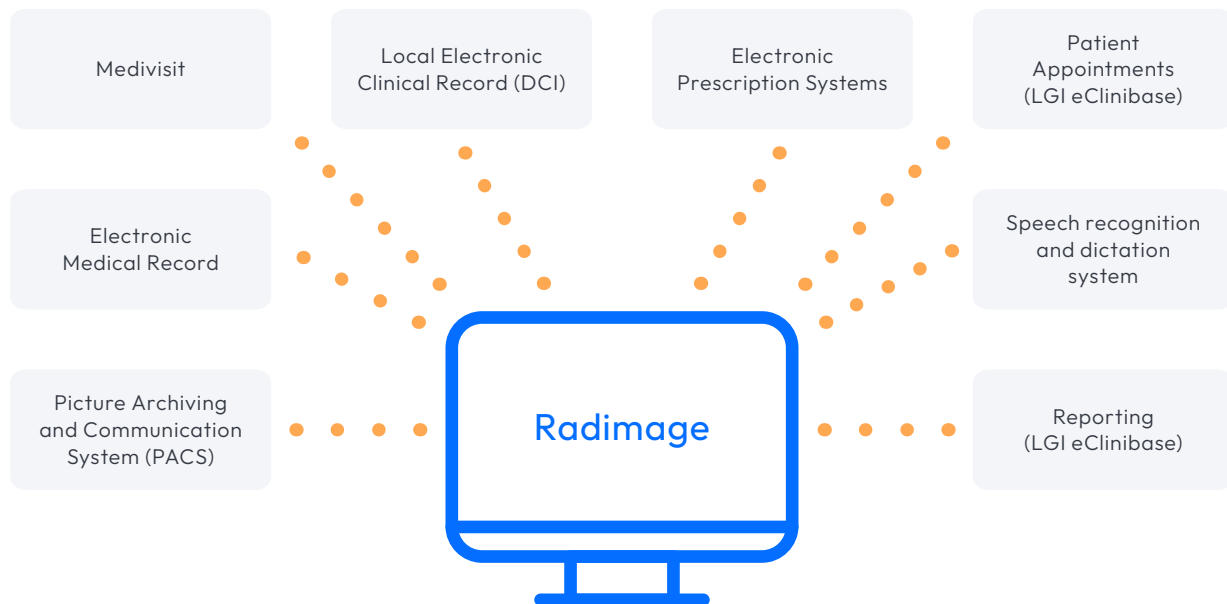

ADMINISTRATIVE STAFF

Data in medical imaging requests no longer have to be manually transcribed into several different systems, saving time and making it easier to track patients across the care pathway.

PATIENTS

Medical imaging procedures are managed electronically, speeding up appointment prioritization and reducing wait times.

Automate transcription, collection and transmission of medical imaging data by connecting LGI Radimage to the various systems used in Quebec healthcare facilities

Already using LGI Radimage?

Make sure your solution is up to date, interoperable with your appointment booking system, and connected to reporting to meet Ministère de la Santé et des Services sociaux requirements.
